BLIND AND FLY SCREEN SOLUTIONS FOR RECREATIONAL VEHICLES

Horrex, part of the Driving Change group of companies, is a rapidly growing Dutch designer and manufacturer of products for the recreational vehicle (RV) market. The wide product range includes fly screen doors, blind and fly screen systems for windows, room dividers and other products.

We supply leading Original Equipment Manufacturers, companies that build-in our products in their motorhomes, camper vans and caravans, worldwide. We do not sell directly to end consumers. A selection of Horrex products and spare parts for the after-sales market is available via selected resellers. Please contact us directly if you cannot find the desired blind or fly screen solution there.

Door Solutions

All Horrex fly screen doors are equipped with high quality pleated mesh to offer protection against insects while ensuring an excellent airflow. From the inside, the dark mesh provides an excellent view to the outside. The sliding mechanism is fully adjustable and is silent in operation.

The fly screen doors suit a wide range of RV models. Horrex fly screen doors are available in a solid lightweight aluminium as well as in different PVC versions with an excellent price-quality ratio.

Room Dividers

Thanks to the innovative design the vertically sliding room dividers are very user-friendly and quick to mount or dismount. In addition, they are relatively light for their size and span. With the help of specially designed runners, the curtain stack is reduced to a minimum and takes up only a small amount of space when stored. The room dividers are available in an aluminium XS version with a click system.

Window Solutions

For light control and/or protection against insects in campers and caravans we provide the following solutions:

- Pleated black-out blinds alone or in combination with:
- Pleated mesh

The products for doors and windows are available in different standard sizes, colours and mounting options, depending on the RV manufacturer and model.

RAL 9001

RAL 7047

RAL 9016

Rear Fly Screens

Apart from fly screen solutions for windows and side doors, Horrex also provides manually operated screens for the back side of recreational vehicles.

The aluminium framed fly screen allows users to maximise airflow in their vehicle while being protected against insects.

Fully height adjustable screens are available for Fiat Ducato vans and identical Peugeot and Citroën models with hinged rear doors.
